Introduction

Ubuntu Innovations (Pty) Ltd relies on information technology systems to support daily business operations. To minimize the impact of security incidents and ensure employees understand their security responsibilities, the company requires an Incident Response Plan and Security Awareness Training Program. These measures help protect company systems, data, and employees from cybersecurity threats.

Incident Response Plan

Detection

Security incidents must be identified as quickly as possible. Employees should monitor for unusual activity such as suspicious emails, unexpected system behavior, unauthorized login attempts, malware alerts, and abnormal network traffic.

Potential incidents should immediately be reported to the IT support team for investigation.

Reporting

Once a security incident is detected, employees must report the issue to the IT support team or designated supervisor.

Reports should include:

- Date and time of incident
- Description of the issue
- Systems affected
- Any actions already taken

Containment

The objective of containment is to prevent the incident from spreading.

Containment actions may include:

- Disconnecting affected devices from the network
- Disabling compromised user accounts
- Blocking malicious IP addresses
- Restricting access to affected systems

Eradication

After containment, the source of the incident must be removed.

Examples include:

- Removing malware
- Deleting malicious files
- Patching vulnerabilities
- Resetting compromised passwords

Recovery

Once threats have been removed, systems can be restored to normal operation.

Recovery activities include:

- Restoring data from backups
- Reconnecting systems to the network
- Testing system functionality
- Monitoring for recurring issues

Lessons Learned

Following every incident, a review should be conducted to identify improvements.

The review should determine:

- What caused the incident
- How effective the response was
- What improvements can be made
- Additional training requirements

Security Awareness Training Outline

Objective

The objective of the training program is to educate employees on cybersecurity risks and promote safe computing practices throughout the organization.

Training Module 1

Phishing Awareness

Topics Covered:

- Identifying suspicious emails
- Recognizing phishing links
- Reporting phishing attempts

Frequency: **Quarterly**

Training Module 2

Password Security

Topics Covered:

- Strong password creation
- Password management
- Multi-factor authentication

Frequency: **Quarterly**

Training Module 3

Safe Internet Usage

Training Module 4

Device Security

Topics Covered:

- Device locking procedures
- Secure Wi-Fi usage
- Software updates
- Data protection

Frequency: **Bi-annually**

Training Module 5

Incident Reporting

Topics Covered:

- Recognizing security incidents
- Reporting procedures
- Escalation processes

Frequency: **Annually**

Conclusion

A structured Incident Response Plan and Security Awareness Training Program help Ubuntu Innovations (Pty) Ltd reduce cybersecurity risks and improve organizational resilience. By preparing employees to identify and respond to threats, the company can better protect its systems, data, and business operations.
